DISTRIBUTION COMMISSIONING FORM (DCF) 4.8 – Voltage regulator (star connection)

Purpose: This instruction covers the testing and commissioning of all replacements or new installations of Star-connected voltage regulators before energisation.

Notes: The following tests must be carried out after installation and before the regulator is put into service.

Address/Pole No.		
Work Package No.	SPIDAWeb Pick ID:	

1. Pre-Installation Checks

Earth resistance test	Ensure that the earth resistance test result is acceptable (DCF 4.1).	
and nameplate	Ensure that the voltage regulator rating matches the system voltage.	

2. Insulation Resistance Test

Use a 5 kV insulation	Short together the S, SL, and L bushings		Results	Acceptable Results
resistance tester.	using fuse wire or shorting cables/clamps. Connect the insulation resistance tester	VR1	МΩ	
Measure the resistance after 1 minute of testing.	between the shorted bushings and earth. The regulator must be in a neutral tap position.	VR2	МΩ	1,000 M $\Omega/1$ G Ω
		VR3	МΩ	

3. Installation Check

	Check that the construction complies with the distribution construction standards and applicable design drawings (DCSH H-33).									
Structure	Check th	Check the regulator for damage, cracks, oil leaks, bushings and excessive dirt.								
Structure	Ensure t	hat the ear	thing system	n is complete	and undama	ged.				
	Ensure t	hat insulate	ed caps or ex	ktension skir	ts are fitted (if	required).				
	Check th	at the plug	indicator is	set at the vo	ltage at which	the voltage	regulator			
	has beer	n connecte	d for each ph	nase.						
		Example: Cooper								
	TAP IN USE	LOAD VOLTS	CONTROL WDG TAP (TANK)	INTERNAL PT RATIO	RCT TAP (CONTROL)	TEST TERMINAL VOLTAGE	OVERALL POTENTIAL RATIO	R		
Nameplate plug	0	23,000	E1/P1	183.3 : 1	120	125.5	183.3 : 1			
indicator	0	22,000	E1/P1	183.3 : 1	120	120	183.3 : 1			
connection	0	20,000	E1/P1	183.3 : 1	110	119	168 : 1	\A/		
	0	19,100	E1/P1	183.3 : 1	104	120	159.2 : 1	W		
	0	15,000	E2/P2	119.8 : 1	120	125.5	119.8 : 1			
	0	12,700	E2/P2	119.8 : 1	104	122.5	103.9 : 1	D		
	0	11,000	E3/P3	91.6 : 1	120	120	91.6 : 1	В		
	0	10,000	E3/P3	91.6 : 1	110	119	84.1 : 1

1				Example: GE			
POTENTIAL AND CONTROL POWER							
LOAD TERMINAL					CONNECT		
	VC	DLTS	TS RATIO VOLTS		NN22 to	NN9 to	F1-2 to
	0	22,000	183.3 : 1	120	NN21	T4-2	T4-3
Ī	0	19,100	159.2 : 1	120	NN21	T4-2	T4-1
Ī	0	12,700	105.8 : 1	120	NN20	T4-2	T4-4
	0	11,000	91.6 : 1	120	NN20	T4-2	T4-3
	Note : For the GE controller, ensure that the connection of the power circuit board, which						
	is located inside the control cabinet in the upper RHS corner, is wired according to the						
	regulator namenlate						

Nameplate plug indicator connection

regulator nameplate.

Example: For 19,100 V, the power circuit board is connected NN22 to NN21, NN9 to T4-2, and F1-2 to T4-1.

4. Handover of Responsibility for the Completion of Items 1-3

I hereby certify that iten network operating authors	ansfer control to the			
Checked by BNA				
Signature		Date & Time		

- 1. DO NOT ENERGISE THE REGULATOR. All the high voltage disconnectors connecting the regulator to the high voltage line must be open.
- 2. The PTSD/BYPASS/ring main switch position must be set as per the network configuration.
- 3. Control unit doors must be locked with two (NMK2) Western Power approved padlocks.
- 4. Attach an "Out of Service (Warning)" tag to the padlock on the front of the control cabinet.
- 5. Inform NOCC of the status of the voltage regulator.
- 6. Ensure the work area is left tidy with no hazards to the public.
- Hand over responsibility to Asset Operations/Operation Maintenance (Primary Response for commissioning.

Control Setting and Testing

	Select the power switch to OFF and the control switch to OFF.			
	Cooper	GE		
Controller power supply setting instructions	The knife switches on the back panel should be set with V1 (potential switch) and V6 (differential voltage, if fitted) closed and C (shorting switch) closed. V6 may be fitted to CL5A on earlier controllers.	The knife switches on the back panel should be set with DS1 (potential switch) closed and DS2 (CT shorting switch) closed.		
	Close the S (source) disconnectors.			
	Set the power switch to INTERNAL and the	e control switch to MANUAL.

	Operate the RAISE/LOWER switch to bring	g the regulator tap position indicator to the				
neutral position (zero), if required.						
	The controller neutral lamp/LED is lit while in the neutral position.					
	Check that the tap position indicator and the lamp/LED are synchronised before					
	continuing.					
	Upload the settings to the control.					
	Cooper	GE				
	Measure the voltage at the voltmeter	Measure the voltage at the meter out				
	terminals to check if the measured	terminals to check if the measured voltage				
	voltage closely matches that of the	closely matches that of the voltage displayed				
	voltage displayed on the panel.	on the panel.				
	Cooper	GE				
	Depress 1, SET VOLTAGE (band centre)	Press the UP, DOWN and ENTER buttons				
	keypad.	until the display indicates the band centre.				
	Set the control switch to MANUAL.					
	Operate the RAISE/LOWER switch to activ	·				
	Allow the tap changer to operate for enough	ugh steps to take voltage out of the				
	bandwidth. Set the control switch to AUTO.					
Controller	After a time delay (30 seconds), the control should cause the regulator to step down to the top bandwidth edge.					
power supply						
setting	Note: If bi-directional (Cooper) is set, it must be disabled (zero) before AUTO can be					
instructions	used. Example : A setting of 120 V (band centre) and 2 V bandwidth = 121 V top bandwidth					
		en the voltage is in band and the tap changing				
	has stopped, set the control switch to MA					
	Operate the RAISE/LOWER switch to active					
	Allow the tap changer to operate for enough					
	bandwidth.	agnisteps to take the voltage out of the				
	Set the control switch to AUTO.					
		I should cause the regulator to step up to the				
	lower bandwidth edge.					
	Example : A setting of 120 V (band centre	and 2 V bandwidth = 119 V lower band edge				
	should be shown in the display. Set the co	ontrol switch to MANUAL.				
	Operate the RAISE/LOWER switch and set	t the regulator to the neutral position.				
	Reset the drag hands to zero.					
	Phase out and then close the L (load) disc	connecting switch.				
	Open the bypass switch.					
	Cooper	GE				
	Open the CT shorting switch C and	Open the CT shorting switch DS2 and return				
	return the control switch to the AUTO the control switch to the AUTO position.					
	position.					

6. Handover of Responsibility

I hereby certify that iten operating authority.	control to the network		
Commissioned by	BNA		
Signature		Date & Time	

- 1. Ensure the work area is left tidy with no hazards to the public.
- 2. Hand over responsibility to the operating authority.
- 3. Return this form to the project file folder and file as a record of commissioning.
- 4. After the on-site project officer signs off on the DCF, a scanned copy of the DCF must be attached to the relevant project documentation.
